ALL ABOUT: TECHNOLOGIES THAT SAVE LIVES!
MEANINGFUL, SUSTAINABLE, AGILE. CONNECTED, INNOVATIVE, MODERN. UNIQUE, DYNAMIC, INTERNATIONAL.
Creating safety by technology.
With 360°-communication and control center solutions we create safety in the field of public safety, industry and transport.
In the symbiosis of innovation, quality and state-of-the-art technology with sustainable benefits we create highly available, innovative technical solutions for emergency call responding, resource management and alerting.

YOUR TASKS

- You develop Java services for our next generation control center solutions
- You have experience with Java technologies and the design of software architectures
- You have experience in different backend frameworks
- You ensure high product stability and product quality
- You actively participate in planning, implementation and continuous improvement
- You work in a cross-functional team in an agile environment
- You are a proactive team player who can also work independently

TECH-STACK
